Data Subject Access Requests (DSARs)

Our Creative Solution for Comprehensive DSARs Management

Working with our data solutions partner, we offer a creative fixed fee solution implementing AI technology to help clients handle DSARs from employees and customers in an efficient and commercial way.

Our approach

Collaborative expertise combining advanced AI technology with our legal know-how, we can identify, capture and process relevant personal data direct from your systems. We then apply an established process of filtering and volume reduction to ensure that only a proportionate amount of data is transferred to active review.

Special review and compliance

Our review teams meticulously consider the documents for relevance and disclosure, addressing any applicable exemptions under data protection laws. We provide a cost-effective service with low-cost review and solicitor oversight to ensure sensitive documents are appropriately flagged and redacted.

End-to-End project management

We oversee the DSAR process from start to finish, including advising you on the scope of the exercise, client reporting, and document delivery. Once you have approved the documents to be disclosed, we supply them in a secure, encrypted format along with a cover letter detailing the data provided and its processing by your organisation.

Commercial approach

We understand that DSARs can be time intensive and frustrating, and take you away from running your business. Our fixed fee solution is a commercial and cost efficient way to approach DSARs whilst complying with your legal obligations.
